

Run Commands with Instructions

Command 1: **cd downloads**

Description: This command allows the user to access the ‘downloads’ directory. This is where our project is located

Command 2: **cd topologyproject**

Description: This command takes the user directly into the folder where the project with all the scripts to be run is inside.

Command 3: **python3 -m venv venv**

Description: This command creates a virtual environment in the current working directory.

Command 4: **sudo python3 main.py**

Description: This command runs the file “main.py” with elevated privileges. Sudo means superuser, so this command allows the bypass of certain operations that may require modifying system software, installing software, etc...
